

Some Power Washing Facts:

Cleaning with water has a scientific form of measurement. That measurement is called "Cleaning Units".

The average professional Power Washer cleans at the rate of 21,000 cleaning units per hour. The average garden hose produces 360 cleaning units per hour.

A Professional Power Washing Contractor can produce 58 times MORE cleaning than a garden hose can using the SAME amount of water.

Places like RV parks already know this. Many of them ONLY allow pressure cleaning rather than hose cleaning because it uses FAR less water and costs less money.

A restaurant (including that dirty dumpster) that takes 40 hours a month for an employee to clean using 14,400 gallons of water is cleaned by a professional Power Washer in 2 hrs per month using 720 gallons.

The average Power Washing truck working FULL time will take 8-12 full 8 hr workdays to use the amount of water that is in a residential swimming pool.

All that time they are utilizing every ounce of water and cleaning 58 times the amount that would be cleaned using non professional methods and equipment.

As an added bonus Professional Power Washers remove tons of dry debris each year before it gets to the storm drains.

"In this time of drought it is important not to throw the baby out with the bathwater. Spaces still must be cleaned and a professional Power Washer can do it without throwing the bath water out at all."

Let us Introduce Ourselves!

The United Association of Mobile Contract Cleaners is the largest not-for-profit power cleaning organization in the US.

Our training and certification programs are second to none.

Our contributing members are all vetted and have at least 5 years experience in cleaning public spaces or the equivalent required training.

While we do offer certifications in different types of cleaning and methods we offer FREE certification testing in SAFETY and WASH WATER CONTROL/ENVIRONMENTAL CLEANING for all in the industry, members and non members alike.

We feel that Safety, Conservation, and Environmental Responsibility is the backbone of our industry and have made it our goal for EVERY power washing contractor large or small to have the tools available to make them effective, safe and responsible in those areas.

The UAMCC has over 1500 members at various membership levels globally.

Let us know if you would like our Environmental director to meet with your local representatives for more information

Water problems?

We can help!

Professional Power Washers

*Health and Safety
Technicians you
can't do without.*

In the 1500's Nostradamus was the first to realize the importance of clean public spaces. After enduring one of the greatest plagues in history, he almost single-handedly wiped out the plague by implementing a strenuous cleaning regimen that focused on everything from eating establishments to open streets.

The importance of cleanliness

Unfortunately, by the early 1900's the importance of clean public spaces were all but forgotten.

Disease was rampant. The carcasses of dead horses were left to rot in the streets as children played nearby.

As science played catch-up again and technology informed us of the dangers of unclean spaces we, as a nation finally took it upon ourselves to work towards clean and safe environments for our families.

Balancing Resources with Health and Safety

As with any activity that expends energy and uses resources the cleaning of our public spaces must be completed in a balanced manner. For example, flooding a street with fire hoses would result in a clean street, but the resulting waste of water resources would make this an impractical and inefficient method of keeping public spaces cleaned.

The Modern Power Wash Professional

The modern power wash professional has many advantages that were not available in the days of Nostradamus. Modern powerwashing equipment is designed to have the maximum cleaning power using the minimum amount of resources.

Pinpoint Accuracy >>>

Modern surface cleaners utilize two pressure tips that operate an inch or so off the ground. These tips together use less water than ONE single landscape sprinkler head. It isn't JUST the water that is doing the cleaning. The pressure produced by the machine combined with the agitation of movement and the heat supplied by the machine make the surface cleaner one of the best bangs for the buck in water conservation.

As you can see from the picture below, a modern surface cleaner, is capable of cleaning sidewalks using minimal amounts of our precious water resources.

Minimal Use Maximum Results >>>

In addition to professional equipment specially made to conserve resources, Power Washers also have options that allow for re-use or recycling of water resources.

For example in some cases water can be vacuumed up and redistributed into foliage to provide for watering of plants. In cases such as these, the water use for cleaning can be completely offset by turning off automatic watering devices for a period of time.

Some cleaning circumstances allow for vacuuming up the water and disposal into the sanitary sewer, where it is recycled back into the city system for reuse for a net water loss of zero.

Still in other, rare, instances where bacteria and other odor issues are not present, there remains the option of reusing water onsite through a closed loop filtration system.

Regardless of which system of conservation is used. The modern Power Washer has, at his disposal, the means and equipment to clean with the maximum impact on the health and safety of the community, while minimally impacting the water supply.

Health and Safety >>>

At the state and local level, the first goal is the health and safety of those who live in the state or district.

Professional Power Washers are your partners in this endeavor. It just so happens we are ahead of the game in the conservation area also and have quietly gone about our business cleaning public spaces without announcing the conservation efforts we have been developing for years. Now is the time for those efforts to be utilized and help reduce waste while keeping our spaces clean.

We are with you every step of the way >>>

We are ready to assist your area with conservation efforts. Our goal and our passion as professional cleaners is to keep our spaces clean, keep our environment healthy and sustainable AND do all this using the least resources possible to get the job done.

Suggest that Professional Power Washers be used for cleaning during this difficult time of drought.
